Project 1 :

E-learning Company Website Design

I have successfully completed the website design for an E-learning company, focusing on creating an engaging and informative homepage that highlights the key features and courses offered. The navigation system was designed to ensure intuitive exploration and a seamless user flow from the homepage to detailed course information. A harmonious color palette was selected to align with the brand's identity, while typography choices were made to enhance clarity and consistency.

Throughout the design process, detailed documentation was provided to explain the design choices, including color schemes, typography, user flow, and navigation decisions. This ensures a cohesive and user-centered final product.

Project 2 :

Music Application (Mobile App UI)

I designed a captivating homepage and intuitive navigation for the music application, ensuring easy exploration of features. The playlist and music player interface was crafted with a visually engaging design, including essential controls for seamless user interaction. A dynamic color scheme and immersive visual elements were chosen to enhance the music theme, complemented by smooth transitions and interactive animations. All design decisions, including color choices and interactions, have been thoroughly documented to demonstrate how they contribute to an enhanced user experience.
